

Abstract of the Disclosure

A method is disclosed for producing a titanium-containing aqueous solution by reacting a titanium alkoxide with water in the presence of at least one of ammonia, and amines selected from a primary amine, a secondary amine, and a tertiary amine, provided that when ammonia and/or the primary amine only is used, at least one selected from the group consisting of an α -diketone, a β -diketone, an α hydroxyketone and a carboxylic acid is used in combination.
